Uludağ'

PORTFOLIO

2026 |

Hello!

I am Said Uludağ

"For me, design is a bridge between disciplines. Industrial design, where empathy intersects with creativity, produces solutions to today's problems. I am trying to build bridges from everyday problems to solutions."

Awards

1st, Digital Game Competition
Windy Wand - Mersin Technoscope, 2019

12m Lobster Yacht Design

In the ENT 453E - Basic Principles of Yacht Design course, I was responsible for 3D modeling, technical analysis, data visualization, and rendering tasks in a group project of five, designing a 12-meter lobster yacht.

We were 2 interior architects and 3 industrial design students

Collabrators: Nisan Horuz, Göksu Biren, Mansi Jain, Pragatheswar M

*I only wanted to include
the most important pages.
You can find the project
details on my Behance page.*

Concept: "Oceanic Exploration"

A sophisticated fusion of architectural engineering and artisanal luxury. This concept elevates functional marine elements like flush latches and spiral ribbing into sculptural centerpieces, creating an interior that feels both high tech and heritage rich.

LEYLA DEMİR

AGE: 32 GENDER: Female
Hometown: Rumelifeneri
Profession: Travel Curator & Visual Storyteller
Yacht Use: Leisure cruising, sunset viewing, slow exploration.

BACKGROUND

Leyla grew up in Rumelifeneri and hence developed a deep fascination with coastal cultures and slow travel. She curates boutique travel experiences and documents journeys through photography and writing. For her, the sea is not about work, it's about pause, framing moments, and sensory immersion.

PRIMARY NEEDS

Viewing & Lounge Deck (Primary Zone)

- Forward-facing or panoramic seating
- Low, reclining furniture
- Uninterrupted sightlines to horizon
- Soft shading (pergola / canopy)

Private Cabin (Rest + Reflection)

- Soft bed / daybed
- Warm, tactile materials
- Filtered natural light
- Acoustic calm

Weekly Routine

Leyla, based in Rumelifeneri, is a curator of slow, sensory travel experiences shaped by her love for coastal cultures. Through intimate, small-scale weekly tours, she blends storytelling, photography, and local immersion to earn a living. For her, the sea is a space of pause, where moments are framed, not rushed, and journeys become deeply personal narratives.

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Rumelifeneri → Istanbul (Kabatlas)	Golden Horn (Within Istanbul)	Istanbul → Princes Island	Princes Island → Beykoz	Rest Day	Beykoz → Rumelifeneri	Rest Day
Route 01	Route 02	Route 03	Route 04	-	Route 05	-
Stays at Fried's place for the night	Stays on the Yacht for the night	Sometimes stay in the yacht. Otherwise a hotel/hostel	Stays at Grandma's Place	At Grandma's Place	Stays at home for the night	At her home

EASTER EGG

I made a Rhino Yacht/Ship
Hull Generator :)

Here are some
pictures that
i created a
plugin for
rhinoceros

This plugin acts
like a naval
architect and
engineer, reducing
design costs!

By configuring it, the desired
yacht can be automatically
designed in seconds.

Hydrostatic Calculation & Confirmation

The plugin automatically calculates hydrostatic values and repeatedly performs surface modeling within the cycle to achieve optimal design. It then generates a report of the final model's values.

Graduation Project

Intro

Expectant mothers

MOMORA's target users are expectant mothers. The product is designed for users who want to regularly monitor their blood pressure at home, track changes in their bodies, and feel calmer, safer, and more in control during the measurement process.

Mothers who need regular blood pressure monitoring

Regular blood pressure monitoring during pregnancy is important for protecting the health of both mother and baby. High blood pressure during pregnancy can sometimes progress without symptoms, allowing for early detection of serious conditions such as preeclampsia. Regular blood pressure monitoring helps in the timely assessment of risks such as headaches, vision problems, edema, and kidney or liver problems. Early detection allows doctors to take necessary precautions and monitor the health of both mother and baby more safely.

Pregnant who need warm

MOMORA is designed not only for mothers who want to track their health data, but also for expectant mothers who want to relax with a feeling of warmth, establish a gentler connection with their bodies.

MOMORA
CALM CARE EVERY MOMENT

BRANDING

MOMORA KIT

MOMORA consists of three main parts.

Main Sleeve

It is an inflatable textile cuff that is worn on the upper arm. It is used for measuring blood pressure.

Warming Care Module

It attaches to the cuff. It's a separate module within the kit. The expectant mother carries it with the cuff and applies it to the desired area, especially the abdomen, providing a controlled sensation of warmth.

Blood Pressure Monitor Module

It attaches to the cuff. A pull-out mechanism inflates the cuff and takes measurements. It has a segment display.

Thanks to this design, MOMORA transforms into a modular care kit that offers both blood pressure measurement and comfort support, all on the same cuff platform.

Product's website

<https://momora-kit-design.vercel.app>

Blood Pressure Monitor Module

It is attached to the cuff. A pull-out mechanism draws in air from the outside, inflates the cuff, and initiates the measurement process..

It features a low energy segment display.

With a pull handle, pregnant women have something to cuddle with, which helps them release endorphins.

Özlem Kristal is a company that produces crystal awards, plaques, trophies, medals, and corporate gifts.

The company states that it has over 20 years of experience. Some of its corporate promotional materials even claim over 35 years of experience.

Location:
Kağıthane Istanbul

I highly recommend this company to Industrial Design students who want to do a factory internship. Seeing the things I designed come to life made me very happy.

30 days Internship

Day 1: Orientation
 Day 2: Research - 4 Ayaklı Minare
 Day 3: Modelling with Rhino - 4 Ayaklı Minare
 Day 4: 3D Printing - 4 Ayaklı Minare
 Day 5: Vitro Laser Engraving - 4 Ayaklı Minare
 Day 6: Revisions - 4 Ayaklı Minare
 Day 7: Research - Gymnastic Competition Medal
 Day 8: Adobe Illustrator - Gymnastic Competition Medal
 Day 9: Desing Revisions - Gymnastic Competition Medal
 Day 10: 3D Modelling - Gymnastic Competition Medal
 Day 11: Rendering - Gymnastic Competition Medal
 Day 12: Revisions (Mold Angle) - Gymnastic Competition Medal
 Day 13: Vector Design - Seljuk and Ottoman Motifs
 Day 14: Motif design with Adobe Illustrator - Seljuk and Ottoman Motifs
 Day 15: Modelling - Seljuk and Ottoman Motifs
 Day 16: Sandblasting and Painting - Seljuk and Ottoman Motifs
 Day 17: Research - Zerzevan Castle
 Day 18: Modelling with Rhino - Zerzevan Castle
 Day 19: Rendering - Zerzevan Castle
 Day 20: Render for Writing on a Rectangular Base
 Day 21: Research - Diyarbakır CityLine
 Day 22: Adobe Illustrator - Diyarbakır CityLine
 Day 23: Revision in Design - Diyarbakır CityLine
 Day 24: Sandblasting and Painting - Diyarbakır CityLine
 Day 25: Assembly and packaging - Diyarbakır CityLine
 Day 26: Research - Mardin Kapı
 Day 27: GrassHopper (Python) for knitting castle stones - Mardin Kapı
 Day 28: Showroom Tour for Uniqe Design - Star-Shaped Trophy
 Day 29: Modelling and Rendering - Star-Shaped Trophy
 Day 30: Galatasaray Plaque

Galatasaray Plaque

I conducted detailed research on the Four-Legged Minaret, one of Diyarbakır's most important historical structures. Using online resources, I examined the structure's architectural features, dimensions, and structural details. This research laid a solid foundation for the digital modeling phase.

The prepared model was etched into the glass using a Vitro laser machine. During this process, the model appeared as a three-dimensional work of art within the glass. This phase of the work demonstrated to me the importance of transitioning from a digital model to an aesthetically pleasing physical product. I also learned how critical accurate laser parameter settings are to achieving visual clarity and detail. I also wanted to add a photo from the assembly department.

Plaque

I conducted research on a medallion to be designed for an international gymnastics competition. I examined previous examples and observed design approaches used in different competitions. During this process, I developed ideas on how cultural motifs could be incorporated into a modern medallion design.

After researching, I converted the ideas I had gathered into 2D vector drawings in Adobe Illustrator. I designed the medallion's basic form, surface patterns, and text areas. I created highly laser-readable designs using black-and-white contrast. This phase gave me experience creating detailed designs in Illustrator and preparing print-readable illustrations.

Galatasaray
Plaque

For this new project, I researched Seljuk and Ottoman motifs. I redrew the motifs I found online in Illustrator and converted them into clean vectors. I made geometric adjustments to match the frame product where the design would be used. This resulted in a design that was both culturally and aesthetically powerful.

I designed the motifs in detail in Illustrator. I paid particular attention to correctly implementing symmetry, rhythm, and repeating patterns. I combined the sketches in different combinations to create alternative patterns. This process taught me the importance of visual harmony in motif design.

I observed the sandblasting and painting processes on manufactured glass surfaces. The prepared template was applied to the glass surface, and then sandblasted to create pattern depth. In the final stage, the motifs were painted gold for an aesthetically pleasing finish. This process allowed me to see firsthand the intersection of digital design and production.

Galatasaray
Plaque

I conducted detailed research on Zerzevan Castle. Since the castle is largely in ruins today, I consulted various sources to find references to its former state. I focused particularly on the architectural layout of the walls, gates, and towers. This research provided the basis for accurately reflecting the architectural details during the modeling process. I examined all the photos on Google Maps and Yandex Maps

After completing the model, I rendered it in Keyshot. I enhanced the castle's visual appeal by adding stone textures, light and shadow effects, and ambient lighting. I've rendered how it will look in a glass.

Galatasaray
Plaque

For the new project, I researched Diyarbakır's significant historical structures. I selected seven different structures that would form the city's skyline and collected appropriate reference images for each. I aimed to create an aesthetic composition that would connect clients with the city. I interpreted the images I found in ChatGPT and created their front views.

I imported the images I collected into Illustrator and transformed them into clean vector drawings. I created the drawings in black-and-white contrast, sharpening the details for laser readability. I also arranged the structures to maintain visual balance.

I revised the drawings to make them more suitable for sanblasting. I thickened fine details and reorganized some areas with simpler lines. This improved readability and enhanced visual integrity. I also transformed the same images into another product by in vitro lasering.

Halo Studio

Scenario

Structure

Materials

Rollable glass display

The HaloStudio display is made from a multi-layer transparent OLED membrane built on a flexible polymer substrate, allowing it to roll into a compact cylinder and unroll into a full 360-degree enclosure. The system combines rollable OLED technology, transparent conductive layers, flexible circuitry, and a motorized tension mechanism to create a stable, immersive workspace that surrounds the user without rigid walls.

Solid-surface composite

A seamless solid-surface polymer composite, consisting of a mineral-filled acrylic resin skin bonded to a lightweight structural core.

- Smooth, warm-neutral
- Dense and reassuring
- Skin-friendly

Walkable floor

Our product consists of table with support for user, rollable display, foldable and moving chair, walkable floor.

Rollable display can be extended around user to the degree of user's needs. It is rolled automatically by the roller with wheels under the display screen.

Walkable floor consist of small circular ellipsoids that can be activated and turned off to the user's needs.

Table has a height regulated handrail to support user while walking on walkable floor or to get up after long exhausting work sessions.

Intr. to Mechanical Design
***Provocative
Mechanism
Design***

Problem:***Water Consumption*****Toilets**

Toilet flushing accounts for approximately 27% of indoor water use, with an average **consumption of 60-70 liters** per person per day.

(US EPA, 2016)

Showers

Showers make up about 20-25% of indoor water use, **consuming 9-15 liters per minute** on average. A typical 10-minute shower uses around 90-150 liters.

(Gallons has been converted to liter.)

(Estimated Use of Water in the United States in 2000--USGS Circular 1268, n.d.)

Clothes Washers

Washing Machines use approximately 13-18% of household water, consuming between **50-100 liters per load** on average.

(US EPA, 2016)

Faucets

Faucet usage contributes to 15-20% of indoor water use. Washing hands or brushing teeth with the tap running uses around **10-15 liters** per session.

(Homepage - European Commission, n.d.)

Wasteful Faucet Usages in Daily Life

If you leave the tap running while **brushing your teeth**, you can waste approximately **8 gallons (30 liters) of water per day**. This equates to nearly 2,920 gallons **(11,000 liters) per year**

Source:[Epa](#)

Washing hands with a running tap can take up to **6 litres per minute** while using a bowl takes about 8 litres

Source:[Greenmatch](#)

Letting your faucet **run for five minutes while washing dishes** can waste 10 gallons of water and uses enough energy to **power a 60-watt light bulb for 18 hours**

Source:[Epa](#)

Provocative Smart Faucet

DESIGN THINKING FOR EVERYDAY LIFE PROBLEMS

Davud Yilmaz, a 26-year-old mechanical engineer at Ford Otosan, makes a steady middle-to-upper-class living. He juggles his hectic work life with his love of taking care of his cat and dog in his contemporary 2+1 flat in Istanbul. His home is designed to meet the needs of both him and his pets combining style and functionality.

Davud Yilmaz

“An energetic engineer and devoted cat and dog dad who balances love and creativity with a busy lifestyle”

For His Pets

Provide a balanced diet and track feeding schedules to ensure his pets' health and happiness. Maintain a seamless record of vet visits, vaccinations, and medications. Ensure his home is both functional for his needs and engaging for his pets.

For Himself

Efficiently balance his demanding career with personal responsibilities. Build innovative systems or adopt tools to simplify daily routines. Advance professionally while nurturing his passion for problem-solving.

Pain Points

Due to a hectic work schedule, he finds it difficult to keep track of his cats' feeding and medication routines. Prefers an integrated solution and finds it difficult to rely on several products for pet care. Concerns about the potential long-term health effects of not consistently monitoring his pets' needs.

Known Habbits

Has a set morning schedule that includes organizing his day and feeding his kitties. Uses devices and technology to maximize his personal and professional lives. Enjoys spending time with his kitties at home and occasionally going to pet-related social gatherings.

Pet Care Behavior

Uses automatic feeders but struggles to track if feeding aligns with dietary needs. Seeks advice online from trusted forums or apps but feels overwhelmed by too much information. Wishes for a solution that could proactively remind or alert him of care schedules for his cats.

Journey Map

Problem Definition

Pet owners find it challenging to keep track of their pet's care (feeding, diet, medication, health) due to the busy pace of everyday living.

HMW make tracking pet feeding and medication easier for busy pet owners?

Outcomes from Guerilla Test

In the guerrilla test we conducted with **thirteen random people**, we analyzed our weaknesses and advantages; and collected feedback that we may integrate into the app.

Positive critics

- Medication feature
- Color and icon selections
- Multitasking and configurations

Negative critics

- Percentages on the dashboard
- Legend icon and colors on the calendar
- The information of the animal's daily food intake

Improvements

- Features for veterinerians
- More specified vaccine features
- Shared account, export/share information

The stand is designed to maximize visitor engagement through a seamless flow between its zones. The entry point features a striking marble display or dynamic patterns to immediately capture attention. From there, visitors are guided to an interactive zone where they can touch and explore marble samples, fostering a tangible connection to the materials. The journey culminates in the exhibition space, showcasing the marble production process from raw blocks to polished finishes, ensuring a logical progression that enhances storytelling and leaves a lasting impression.

FROM TDS;

We can understand that PVC has Fire Resistance, Electrical Insulation, Versatility, Recyclability.

While PVC offers many advantages, it's important to note that it also has some limitations, such as its susceptibility to degradation at high temperatures and its potential to release toxic gases when burned at high temperatures. Therefore, proper handling and disposal practices should be followed to ensure safety and environmental responsibility.

ENT357E 2023-2024 SPRING, Assignment 2
Muhammed Said Uludag - 020210629

PLASTIC FIXED HINGE

A plastic fixed hinge is a type of hinge mechanism used in various applications where two objects need to pivot relative to each other, typically at a fixed angle.

In kitchen cabinets, wardrobes, or storage cabinets, movable parts like doors, flaps, and compartments; plastic fixed hinges are often used.

MANUFACTURING PROCESS

INJECTION MOLDING

Highly versatile in terms of moulding different shapes, highly automated, cost-effective, high volume mass production. Inj. cycle time: 30-60sec.

MATERIAL

POLYVINYL
CHLORIDE (PVC)

BENEFITS TO USE PLASTIC

Chemical stability Clarity / transparency Flexible or rigid, Biocompatibility, High strength, Economical, Dimensional stability, High impact strength

Animation Palm Toy

Description

The toy was designed for animating a figure through rotating the roll input. The animation is replaying in ping-pong loop.

Mechanism

The part C is for effort input. It is rotating in x-y axes. It is binded with part A. While turning the part C, The part A is turning. The part A is used for transmitting the rotating input effort to the small gear located in the same piece. The part B is taking its movement power input from that half small gear part. Since using two half gears in reverse rotating way, The part B can move both sides as reach one side to other sequentially. The animation stickers on the part B, is showed in the square space.

Gear Properties

The part A (bottom) has 30 teeth
The part A (top half gear) has 15 teeth
The part B has 30 teeth

MA or Velocity Ratio

$$(2 \times \pi \times 5.2) / 25 = \sim 1.30$$

Material: Polyacetal (POM)

Polyoxymethylene, also known as acetal polyacetal and polyformaldehyde, is an engineering thermoplastic used in precision parts that require very hardness, low friction and excellent dimensional stability. It is used in this toy because of small part applications that require hardness and lubricity.

Manufacturing Methods

Injection Molding for Parts A, B and C

Multi shot injection molding for the outer part of the toy that contains the system

In mould decoration for square animation len

Staking for fasteners

The Multipurpose Toolkit for Jewelry Designers MultiMate Tool

Especially crafted for jewelry designers, this multitool kit empowers you to focus on creativity and precision without the hassle of juggling multiple tools.

What's Inside?

Pliers - Ergonomically designed for comfortable grip and precise handling, perfect for intricate bending, cutting, and shaping of wires and materials.

Snap Fastener Machine - It is a specialized piece of equipment used to attach snap fasteners (press studs or poppers) to various materials, such as fabric, leather, or plastic.

Measuring Tape - Get accurate measurements down to the millimeter, ensuring flawless sizing for every piece.

Needle Threader - Simplifies threading, making it easy to work with fine details and add delicate elements to your designs.

In the EEUT 220E - Studio I course, I was responsible for prototyping, modelling, technical drawing and arrangements of the parts.

We were 2 industrial design students

Group Project
Collabrator: Mısra Dönmez

We produced alternative body types and chose the most optimum one.

We produced the part with the boot inside in two parts.

We used a cable with 4 branches passing through it. This way we were able to turn both lights on and off separately.

We managed to attach both light heads using rod and nuts.

Drilling
(radius=4mm)

The two parts are glued together

Fillets are corrected

The piece with the printer is placed on the upper base.

All cables and circuit elements are soldered.

The cables are passed through the upper part and soldered to the LED strip.
